

I CLAIM:

1. A golf putter, comprising:

5 (a) a putter head having a striking face, a sole, a center line marker marking a center of gravity of said putter head, a toe normally positioned remote from a user when in play and a heel opposite said toe;

10 (b) an elongated putter shaft having a grip on one end and, at an opposite end, attached to said putter head between the center line marker and said toe, said putter shaft having a transverse marking which lines up vertically with the center line marker on said putter
15 head when a user is holding said putter in a putting position with the golfer's eyes over said center line marker of said putter head.

2. The golf putter according to claim 1, wherein the center
20 line marker is perpendicular to the striking face and is vertically aligned with the center of gravity of said putter head.

3. The golf putter according to claim 1, wherein said putter
25 shaft extends across said putter head from proximate said toe towards said heel at an acute angle with the sole of

said putter head, crossing the center line of said putter head.

4. The golf putter according to claim 1, wherein the transverse marking on said shaft marks the center of gravity of said shaft when said putter is in the putting position.

5. The golf putter according to claim 3, wherein said putter shaft extends up from said putter head vertically, when said putter is in the putting position and then angles toward the golfer.

6. A method of aligning a putter and a golfer's eyes to a golf ball and a desired line of travel, comprising:

(a) providing a putter which has a shaft attached proximate a toe of a putter head and at least a portion of which shaft angles back towards a golfer when said golfer and said shaft are in the putting position;

(b) placing a center line marker over a center of gravity of the putter head;

(c) placing a marker on an upper side of the shaft of said putter which vertically aligns with the center

line marker when said putter is in the putting position; and

5

- (d) holding said putter in the putting position and then aligning a golfer's eyes with the aligned mark on said shaft and said center line mark on the putter head such that the putter head is perpendicular to the desired direction of travel of the golf ball.
